

Insurable Structure No-Impact Certification

This is to certify that I am a duly qualified engineer licensed to practice in the State of North Carolina.

This further certifies that no insurable structures* are located in areas that would be affected by base flood elevation increases for _____ in _____, associated with the proposed construction of _____.

*An insurable structure, as defined by the FEMA MT-2 instructions, is “a walled and roofed building, other than a gas or liquid storage tank, that is principally above ground and affixed to a permanent site, as well as a manufactured home on a permanent foundation. For the latter purpose, the term includes a building while in the course of construction, alteration or repair, but does not include building materials or supplies intended for use in such construction, alteration or repair, unless such materials or supplies are within an enclosed building on the premises.”
